

Abhiram Ramachandran Phildalphia, PA

ramachandran.abhiram@gmail.com | github.com/theabhiramr | linkedin.com/in/theabhiramr | theabhiramr.dev

Computer Science student at Drexel University (graduating June 2027) with full-stack development, agentic AI, and embedded systems experience across production and user-facing applications. Seeking a full-time software engineering role to build impactful, scalable technologies.

Education

Drexel University Bachelor of Science in Computer Science, Minor in Business Analytics | Philadelphia, PA

Sep 2022 – Jun 2027

Universitat Pompeu Fabra Barcelona Program for Interdisciplinary Studies, Escola d'Enginyeria | Barcelona, Spain

Jan 2025 – Mar 2025

Skills

Programming Languages: Python, Java, C/C++, TypeScript, JavaScript, C#, SQL, R, Rust, Swift, Dart, Markdown

Tools & Frameworks: Git, VSCode, IntelliJ, PyCharm, Node.js, React, Expo, Flutter, SwiftUI, Jupyter, Jira, Lucid

Cloud & DevOps: AWS (ECS, S3, Lambda, Fargate, ALB, SQS, SES, CloudWatch, CloudFormation, Bedrock), Docker, CI/CD, GitHub Actions, Cloudflare Workers, Databricks, IaC

AI & Agentic Tools: Claude Code, MCP, PyTorch, TensorFlow, OpenAI API, LangChain

Work Exprience

Cloud Developer Co-op Bristol Myers Squibb | Princeton

Apr 2026 – Sep 2026

- Simplified infrastructure provisioning across 75+ Cloud team projects by building a full stack, agentic GitHub template repo (Python, CloudFormation, Databricks/JWT authorization) that automates AWS Fargate/ALB deployment, cutting deployment time by 4 months.
- Reduced alert noise across 500+ AWS accounts by architecting a Lambda-based classification pipeline that intercepts SQS messages, routing informational alerts to a dashboard and critical alerts to an email digest via SES.
- Onboarded 100+ new employees by building an AI chatbot powered by MDBase, BMS's internal MCP knowledge base, that answers user questions and explains cloud operations in real time.
- Automated project governance across 20+ projects by building a requirements-driven Claude skill that parses spec docs into Jira-ready user stories and epics.

Software Development Engineering Co-op Epiq Solutions | Mount Airy, MD

Apr 2024 – Sep 2024

- Built unified VITA49 packet parser libraries for 32-bit SDR architectures using Test Driven Development (TDD), improving production testing efficiency by 20%.
- Programmed JSON interfaces for software defined radios in Python, adhering to DevOps practices to improve code performance by 15%.
- Designed Linux user interfaces in Python for test stations using PyQt and Matplotlib to streamline production testing procedures.
- Tested 200+ digital, tuner, and reference modules in SDRs for appropriate phase noise and power distribution, hitting quality assurance targets.

Software Development Intern EV Buddy, Inc | Edison, NJ

Jun 2023 – Sep 2023

- Programmed sniffer data parsing software in C++ and Python to analyze EV charging protocols, improving success of prototype by 45%.
- Researched EV charging protocols (CCS, CHAdeMO) and developed technical specifications for a vehicle-to-vehicle charging solution, informing prototype architecture.
- Used OpenEVSE Arduino embedded system to build a prototype architecture that interfaced with RS485 and CAN protocols used in EVs.
- Designed UX flows (50+ Figma iterations) for a social app targeting EV owners to enable them to troubleshoot issues or provide assistance.

Projects

Janata Chinmaya Mission | Remote

Aug 2025 – Aug 2026

Built a cross-platform social app (Expo, React Native, Cloudflare Workers) for Chinmaya Mission's youth wing using Claude Code-driven agentic workflows, helping members discover events, volunteer opportunities, and connect through community boards.

CrashMath College of Computing and Informatics | Philadelphia, PA

Sep 2022 – Jun 2023

Led development of a gamified calculus learning platform (Firebase, JavaScript, OpenAI API) that leverages an intelligent tutoring chatbot to provide personalized problem-solving assistance.
